INTRODUCTION

- Read this manual carefully before using the appliance and follow the instructions for safety operation.

- Sanyo never guarantee any safety if the appliance is used for any objects other than intended use or used by any procedures other than those mentioned in this manual.

- Keep this manual in an adequate place to refer to it as necessary.

- The contents of the manual will be subjected to change without notice due to the improvement of performance or functions.

- Contact Sanyo sales representative or agent if any page of the manual is lost or page order is incorrect.

- Contact Sanyo sales representative or agent if any point in this manual is unclear or if there are any inaccuracies.

- No part of this manual may be reproduced in any form without the expressed written permission of Sanyo.

⚠️ CAUTION

SANYO guarantees the product under certain warranty conditions. SANYO in no way shall be responsible for any loss of content or damage of content.
Precautions are illustrated in the following way:

**WARNING**
Failure to observe WARNING signs could result in a hazard to personnel possibly resulting in serious injury or death.

**CAUTION**
Failure to observe CAUTION signs could result in injury to personnel and damage to the unit and associated property.

Symbol shows:
- △ this symbol means caution.
- ○ this symbol means an action is prohibited.
- ● this symbol means an instruction must be followed.

Be sure to keep this manual in a place accessible to users of this unit.

Some warning and/or caution labels are attached on the unit. Following shows the description of such labels.

<table>
<thead>
<tr>
<th>![Label]</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Warning]</td>
<td>This label is on the cover in which the electrical components of high voltage are enclosed to prevent the electric shock. The cover should be removed by a qualified engineer or a service personnel only.</td>
</tr>
<tr>
<td>![Attention]</td>
<td>This symbol means attention or refer to document.</td>
</tr>
<tr>
<td>![Earth]</td>
<td>This symbol means earth.</td>
</tr>
<tr>
<td>![On]</td>
<td>This symbol means power switch “ON”.</td>
</tr>
<tr>
<td>![Off]</td>
<td>This symbol means power switch “OFF”.</td>
</tr>
</tbody>
</table>

**WARNING**
As with any equipment that uses CO₂ gas, there is a likelihood of oxygen depletion in the vicinity of the equipment. It is important that you assess the work site to ensure there is suitable and sufficient ventilation. If restricted ventilation is suspected, then other methods of ensuring a safe environment must be considered. These may include atmosphere monitoring and warning devices.
PRECAUTIONS FOR SAFE OPERATION

WARNING

Do not use the unit outdoors. Current leakage or electric shock may result if the unit is exposed to rain water.

Only qualified engineers or service personnel should install the unit. The installation by unqualified personnel may cause electric shock or fire.

Install the unit on a sturdy floor and take an adequate precaution to prevent the unit from turning over. If the floor is not strong enough or the installation site is not adequate, this may result in injury from the unit falling or tipping over.

Never install the unit in a humid place or a place where it is likely to be splashed by water. Deterioration of the insulation may result which could cause current leakage or electric shock.

Never install the unit in a flammable or volatile location. This may cause explosion or fire.

Never install the unit where acid or corrosive gases are present as current leakage or electric shock may result due to corrosion.

Always ground (earth) the unit to prevent electric shock. If the power supply outlet is not grounded, it will be necessary to install a ground by qualified engineers.

Never ground the unit through a gas pipe, water main, telephone line or lightning rod. Such grounding may cause electric shock in the case of an incomplete circuit.

Connect the unit to a power source as indicated on the rating label attached to the unit. Use of any other voltage or frequency other than that on the rating label may cause fire or electric shock.

Never store volatile or flammable substances in this unit if the container cannot be sealed. These may cause explosion or fire.

Do not insert metal objects such as a pin or a wire into any vent, gap or any outlet on the unit. This may cause electric shock or injury by accidental contact with moving parts.

Use this unit in safe area when treating the poison, harmful or radiate articles. Improper use may cause bad effect on your health or environment.

Turn off the power switch (if provided) and disconnect the power supply to the unit prior to any repair or maintenance of the unit in order to prevent electric shock or injury.

Do not touch any electrical parts (such as power supply plug) or operate switches with a wet hand. This may cause electric shock.
PRECAUTIONS FOR SAFE OPERATION

**WARNING**

- Ensure you do not inhale or consume medication or aerosols from around the unit at the time of maintenance. These may be harmful to your health.

- Never splash water directly onto the unit as this may cause electric shock or short circuit.

- Never put containers with liquid on the unit as this may cause electric shock or short circuit when the liquid is spilled.

- Never bind, process, or step on the power supply cord, or never damage or break the power supply plug. A broken supply cord or plug may cause fire or electric shock.

- Do not use the supply cord if its plug is loose. Such supply cord may cause fire or electric shock.

- Never disassemble, repair, or modify the unit yourself. Any such work carried out by an unauthorized person may result in fire, or electric shock or injury due to a malfunction.

- Disconnect the power supply plug if there is something wrong with the unit. Continued abnormal operation may cause electric shock or fire.

- When removing the plug from the power supply outlet, grip the power supply plug, not the cord. Pulling the cord may result in electric shock or fire by short circuit.

- Disconnect the power supply plug before moving the unit. Take care not to damage the power cord. A damaged cord may cause electric shock or fire.

- Disconnect the power plug when the unit is not used for long periods. Keeping the connection may cause electric shock, current leakage, or fire due to the deterioration of insulation.

- If the unit is to be stored unused in an unsupervised area for an extended period, ensure that children do not have access and that doors cannot be closed completely.

- The disposal of the unit should be accomplished by appropriate personnel. Remove doors to prevent accidents such as suffocation.

- Do not put the packing plastic bag within reach of children as suffocation may result.
Use a dedicated power source (a dedicated circuit with a breaker) as indicated on the rating label attached to the unit. A branched circuit may cause fire resulting from abnormal heating.

Connect the power supply plug to the power source firmly after removing the dust on the plug. A dusty plug or improper insertion may cause a heat or ignition.

Never store corrosive substances such as acid or alkali in this unit if the container cannot be sealed. These may cause corrosion of inner components or electric parts.

Check the setting when starting up of operation after power failure or turning off of power switch. The stored items may be damaged due to the change of setting.

Be careful not to tip over the unit during movement to prevent damage or injury.

Prepare a safety check sheet when you request any repair or maintenance for the safety of service personnel.
ENVIRONMENTAL CONDITIONS

This equipment is designed to be safe at least under the following conditions (based on the IEC 61010-1):

- Indoor use;
- Altitude up to 2000 m;
- Ambient temperature 5°C to 40°C
- Maximum relative humidity 80% for temperature up to 31°C decreasing linearly to 50% relative humidity at 40°C;
- Mains supply voltage fluctuations not to exceed ±10% of the nominal voltage;
- Other supply voltage fluctuations as stated by the manufacturer;
- Transient overvoltages according to Installation Categories (Overvoltage Categories) II; For mains supply the minimum and normal category is II;
- Pollution degree 2 in accordance with IEC 60664.
1. Control panel (on the upper front of the door): Used for temperature setting and indication of operating status is displayed on the panel. See page 10 for details.

2. Outer door: To open the door, grip the handle. On closing, lock the outer door latch completely.

3. Inner door: The operation of the inner door should be quick to minimize the temperature rise in chamber. Lock the inner door latch completely when the door is closed. The door is removable for cleaning or defrosting. See page 23 “Routine maintenance”.

4. Outer door latch: Always lock the latch when the outer door is closed.

5. Inner door latch: Always lock the inner door latch when the inner door is closed.

6. Magnetic door gasket: This provides a tight door seal and prevents cold air leak. Keep clean.

7. Access port (rear and bottom): This is used for leading a cable and sensor of a measuring equipment, or nozzle of back-up system to chamber.

8. Air intake vent (grille): Do not block this vent to keep the proper cooling performance.

9. Caster: 4 casters are provided to facilitate moving of the cabinet. For the installation, adjust the leveling foot so that the front 2 casters cannot contact with the floor.

10. Leveling foot: The height of the freezer can be adjusted by this screw type foot. Keep the unit in level at the installation.

11. Condenser filter (behind the grille): This filter prevents the dust from accumulating on the condenser. The dusty filter may cause failure of refrigerating device. Clean the filter once a month. See page 22 “Routine maintenance” for the cleaning.

12. Space for temperature recorder: An automatic temperature recorder (optional component) can be attached here. See page 31 “Temperature recorder (Option)”.

13. Key lock: Turn clockwise to 180° with a key and the outer door is securely locked.

14. Fixture (on back side): 2 fixtures are provided as spacers between the cabinet and wall and also serve as hooks to fix the unit. See page 12 “Installation”.

15. Power switch: This is for turning ON/OFF the power to the unit. ON – “I” OFF – “O”

16. Remote alarm terminal: This is used to notice an alarm condition of the unit to remote location. Refer to page 17 “Remote alarm terminal”.

17. Battery switch: This is a switch for a battery for power failure alarm. Normally, turn on this switch. Be sure to turn off this switch if the freezer is not in operating for the long period (over one month).
FREEZER COMPONENTS

Control panel

1. Digital temperature indicator: This indicator shows the present chamber temperature or set temperature.

2. Status monitor lamp (STATUS): This lamp lights when environmental condition or status gets worse or the unit is out of normal operation.

3. Battery check lamp (BATTERY): This lamp lights to recommend the battery replacement. This lamp blinks when a fan motor is maintained. For the replacement, consult Sanyo sales representative or agent.

4. Door check lamp (DOOR): This lamp lights when the door is open.

5. Alarm lamp (ALARM): This lamp is flashed during alarm condition.

6. Filter check lamp (FILTER): This lamp lights when the excessive dust is accumulated on the condenser filter. When this lamp lights, clean the condenser filter following the procedure on page 22.

7. Numerical value shift key (↑): Pressing this key in the setting mode causes the numerical value to shift. “ON-OFF” of key lock can be selected by pressing this key in the key lock mode. By pressing this key for more than 5 seconds in the temperature display mode leads setting mode for alarm temperature, alarm resume time, compressor delay time and door alarm delay time. Refer to page 14, 15, 16, 19 and 20 for details respectively.

8. Digit shift key (▶): Pressing this key in the setting mode causes the changeable digit to shift. Key lock is available by pressing this key for more than 5 seconds in the temperature display mode. Refer to page 14 for details.

9. Set key (SET): Temperature setting mode is led by pressing this key and the changeable digit is flashed. By pressing this key again, the setting is memorized. The set mode returns to the temperature display mode automatically when 90 seconds has passed without any key operation. Refer to page 14 for details.

10. Status key (STATUS): By pressing this key in the event of the status monitor lamp ON, the status code is displayed on the digital temperature indicator. This key is not effective when the freezer is running normally. See page 18 for details.

11. Alarm test key (ALARM TEST): To check the alarm system during freezer operation. Pressing this key with the battery switch ON gets the alarm lamp to flash, the remote alarm to operate, and the buzzer to sound.

12. Buzzer stop key (BUZZER): To silence the audible alarm under alarm condition, press this key. The buzzer during alarm test cannot be silenced by this key.
INSTALLATION SITE

To operate this unit properly and to obtain maximum performance, install the unit in a location with the following conditions:

- **A location not subjected to direct sunlight**
  Do not install the unit under direct sunlight. Installation in a location subjected to direct sunlight cannot obtain the intended performance.

- **A location with adequate ventilation**
  Leave at least 10 cm around the unit for ventilation. Poor ventilation will result in a reduction of the performance and consequently the failure.

- **A location away from heat generating sources**
  Avoid installing the unit near heat-emitting appliances such as a heater or a boiler etc. Heat can decrease the intended performance of the unit.

- **A location with little temperature change**
  Install the unit under stable ambient temperature. The allowable ambient temperature is between +5 and +30°C.

- **A location with a sturdy and level floor**
  Always install the unit on a sturdy and level floor. The uneven floor or tilted installation may cause failure or injury. Install the unit in stable condition to avoid the vibration or noise. Unstable condition may cause vibration or noise.

⚠️ **WARNING**

*Install the unit on a sturdy floor.* If the floor is not strong enough or the installation site is not adequate, this may result in injury from the unit falling or tipping over.

*Select a level and sturdy floor for installation.* This precaution will prevent the unit from tipping. Improper installation may result in water spillage or injury from the unit tipping over.

- **A location not prone to high humidity**
  Install the unit in the ambient of 80% R.H. or less humidity. Installation under high humidity may cause current leakage or electric shock.

⚠️ **WARNING**

*Do not use the unit outdoors.* Current leakage or electric shock may result if the unit is exposed to rain water.

*Never install the unit in a humid place or a place where it is likely to be splashed by water.* Deterioration of the insulation may result which could cause current leakage or electric shock.

- **A location without flammable or corrosive gas**
  Never install the unit in a flammable or volatile location. This may cause explosion or fire or may result in the current leakage or electric shock by the corrosion of the electrical components.

- **A location without the possibility of anything fall**
  Avoid installing the unit in the location where anything can fall down onto the unit. This may cause the breakdown or failure of the unit.
1. Removing the packaging materials and tapes
Remove all transportation packaging materials and tapes. Open the doors and ventilate the unit. If the outside panels are dirty, clean them with a diluted neutral dishwashing detergent. (Undiluted detergent can damage the plastic components. For the dilution, refer to the instruction of the detergent.) After the cleaning with the diluted detergent, always wipe it off with a wet cloth. Then wipe off the panels with a dry cloth.

2. Adjusting the leveling foot
Extend the leveling feet by rotating them counterclockwise to contact them to the floor. Ensure the unit is level. (Fig. 1)

3. Fixing the unit
Two fixtures are attached to the rear of the frame. Fix the frame to the wall with these fixtures and rope or chain. (Fig. 2)

4. Ground (earth) (Except for USA and CANADA)
The ground (earth) is for preventing the electric shock in the case of the electrical insulation is somehow degraded. Always ground the unit at the time of installation.

⚠️ WARNING ⚠️
Use a power supply outlet with ground (earth) to prevent electric shock. If the power supply outlet is not grounded, it is necessary to install a ground by qualified engineers.
Never ground the unit through a gas pipe, water main, telephone line or lightning rod. Such grounding may cause electric shock in the case of an incomplete circuit.
START-UP OF UNIT

Follow the procedures for the initial and consequent operations of the unit.

1. Turn off the switch of the back-up system (optional component) if it is installed.

2. Connect the power supply cord to the dedicated outlet having appropriate rating with the chamber empty, and turn on the power switch on the freezer.

3. Turn on the battery switch.

4. Set the desired chamber temperature. See page 14 for the temperature setting.

5. Check that the chamber temperature reaches the desired temperature.

6. Turn on the switch of back-up system (optional component) if it is installed.

7. Make sure that the alarm lamp blinks and the buzzer sounds by pressing the alarm test key (ALARM TEST). The remote alarm is also operated. E09 is displayed on the digital temperature indicator if the battery switch is OFF. Make sure to turn on the battery switch.

8. After confirming the above, you can put articles into the freezer chamber in a small batch to prevent the temperature rise.

9. An alarm function is to work normally, or push and confirm an alarm test key (the condition that a battery switch is on). It is normal if alarm lamp blinking, remote alarm operation and a buzzer ring.

Operation after power failure
The set value is memorized by nonvolatile memory. Accordingly, the freezer resumes the operation with setting before power failure. When the freezer is recovered from power failure with the chamber temperature higher than the preset temperature, then the high temperature alarm is activated and the buzzer sounds and the remote alarm is also activated. Please push the buzzer stop key (BUZZER) to silence buzzer and take appropriate actions if needed.
CHAMBER TEMPERATURE SETTING

Table 1 shows the basic procedure for setting the chamber temperature. Perform key operations in the sequence indicated in the table. The example in the table is based on the assumption that the desired temperature is -75°C.

Note: The unit is set at the factory that the chamber temperature -80°C.

Table 1. Basic operation sequence (Example: Chamber temperature -75°C)

<table>
<thead>
<tr>
<th>Description of operation</th>
<th>Key operated</th>
<th>Indication after operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Turn the power switch ON.</td>
<td>----</td>
<td>The current chamber temperature is displayed.</td>
</tr>
<tr>
<td>2 Press set key.</td>
<td>SET</td>
<td>The second digit is flashed.</td>
</tr>
<tr>
<td>3 Set to -75 with the numerical value shift key and digit shift key.</td>
<td></td>
<td>When pressed, the figure of settable digit changes.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>When pressed, the settable digit is shifted.</td>
</tr>
<tr>
<td>4 Press set key.</td>
<td>SET</td>
<td>Set temperature is memorized and the current chamber temperature is displayed.</td>
</tr>
</tbody>
</table>

Note:
- The temperature set mode returns to the temperature display mode automatically when 90 seconds has passed without any key operation.
- Although the value of the chamber temperature setting can range from -50°C to -90°C, the guaranteed temperature when there is no load is -86°C when the ambient temperature is 30°C.

KEY LOCK FUNCTION

This unit is provided with the key lock function. When the key lock is ON, change of temperature setting through the key pad is not available. The key lock is set in OFF at the factory.

<table>
<thead>
<tr>
<th>Display</th>
<th>Mode</th>
<th>Function</th>

<tr>
<td>2 Press digit shift key for 5 seconds.</td>
<td></td>
<td>The first digit is flashed.</td>
</tr>
<tr>
<td>3 Press numerical value shift key and scroll the figure to 1.</td>
<td></td>
<td>When pressed, the figure of settable digit changes.</td>
</tr>
<tr>
<td>4 Press set key.</td>
<td>SET</td>
<td>The key lock is set to ON. The current chamber temperature is displayed.</td>
</tr>
</tbody>
</table>

• The temperature set mode returns to the temperature display mode automatically when 90 seconds has passed without any key operation.
This unit is provided with the high and low temperature alarm and the temperature at which the alarm is activated is changeable.

The following procedure shows the setting of alarm temperature according to the condition below:
- High temperature alarm: activates at the temperature 5°C higher than the set temperature
- Low temperature alarm: activates at the temperature 5°C lower than the set temperature

Note:
The alarm temperature is set at the factory 10°C higher and lower than the set temperature.
The available range of alarm temperature is between 5°C and 20°C higher or lower than the set temperature.

Table 3. Procedure for setting high temperature alarm

<table>
<thead>

<td>▶▶</td>
<td>When pressed, the changeable digit moves.</td>
</tr>
<tr>
<td>6 Press set key.</td>
<td>SET</td>
<td>Alarm temperature is memorized and the current chamber temperature is displayed.</td>
</tr>
</tbody>
</table>

• The temperature set mode returns to the temperature display mode automatically when 90 seconds has passed without any key operation.
The alarm buzzer is silenced by pressing buzzer stop key (BUZZER) on the control panel during alarm condition (The remote alarm is not silenced).

The buzzer will be activated again after certain suspension if the alarm condition is continued. The suspension time can be set by following the procedure shown in the Table 5 below.

The example in the table is based on the assumption that the desired duration is 20 minutes.

**Note:** The duration is set in 30 minutes at the factory.

---

**Table 5. Setting procedure for alarm resuming time (change from 30 minutes to 20 minutes)**

<table>
<thead>
<tr>
<th>Description of operation</th>
<th>Key operated</th>
<th>Indication after operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>----</td>
<td>The current chamber temperature is displayed.</td>
</tr>
<tr>
<td>2  Press digit shift key for 5 seconds.</td>
<td>▲</td>
<td>The first digit is flashed.</td>
</tr>
<tr>
<td>3  Set the figure to F25 with the digit shift key and numerical value shift key.</td>
<td>▲ ▲</td>
<td>The settable digit is shifted.</td>
</tr>
<tr>
<td>4  Press set key.</td>
<td>SET</td>
<td>The current resume time is displayed. The second digit is flashed.</td>
</tr>
<tr>
<td>5  Set the figure to 020 with the numerical value shift key.</td>
<td>▲</td>
<td>When pressed, the figure of settable digit changes.</td>
</tr>
<tr>
<td>6  Press set key.</td>
<td>SET</td>
<td>The setting is memorized and the current chamber temperature is displayed.</td>
</tr>
</tbody>
</table>

- The settable alarm resume time is 10, 20, 30, 40, 50, or 60 minutes (The setting is 010, 020, 030, 040, 050, or 060). The buzzer would not resume if the resume time is set in 000.
- It is recommended to set the alarm resume time when the freezer is not under alarm condition. The setting during alarm condition is effective on the next alarm condition.
- The setting cannot be changed during power failure.
- The remote alarm during power failure or buzzer and remote alarm during alarm test cannot be silenced.
- The set mode returns to the temperature display mode automatically when 90 seconds has passed without any key operation. In this case, any setting before pressing set key (SET) is not memorized.
The terminal of the remote alarm is installed at the lower left side of the unit. The alarm is outputted from this terminal. Contact capacity is DC 30 V, 2 A.

Contact output:

<table>
<thead>
<tr>
<th></th>
<th>COM</th>
<th>N.O.</th>
<th>N.C.</th>
</tr>
</thead>
<tbody>
<tr>
<td>At normal</td>
<td>Open</td>
<td>Close</td>
<td>Open</td>
</tr>
<tr>
<td>At abnormal</td>
<td>Close</td>
<td>Open</td>
<td>Close</td>
</tr>
</tbody>
</table>

**Note:**
The alarm is actuated when the power cord is disconnected from the outlet or the power switch is OFF.
The freezer has a function to monitor the running status of the unit as shown in Table 6 below. This is to notice the running status getting worse (not failure).

1. The status monitor lamp is lit when one of the running status shown in Table 6 is detected.
2. The S code (--X, X: 1 to 3) is displayed on the temperature indicator by pressing STATUS key when the STATUS lamp is lit.
3. Pressing the STATUS key again returns to current chamber temperature on the temperature indicator. (The indication returns to the chamber temperature display automatically when no key is operated for 90 seconds.)

<table>
<thead>
<tr>
<th>Kind of function</th>
<th>Status</th>
<th>Indication</th>
<th>If this status continues</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Notice of abnormal ambient temperature</td>
<td>When the ambient temp. is over approx. 35°C or lower than about 0°C.</td>
<td>STATUS lamp lights. &quot;--1&quot; is displayed.</td>
<td>Decrease of cooling performance or durability of refrigerating circuit.</td>
<td>Recheck air-conditioning of installed site.</td>
</tr>
<tr>
<td>Notice of low voltage</td>
<td>When the power source voltage is less than approx. 195 V when the rated voltage is between 220 and 240 V.</td>
<td>STATUS lamp lights. &quot;--2&quot; is displayed.</td>
<td>Abnormal heat at power supply outlet or degrade of starting performance of refrigerating circuit</td>
<td>Use dedicated power source.</td>
</tr>
<tr>
<td>Notice of overload condition</td>
<td>When the running rate of refrigerating Circuit is higher than usual.</td>
<td>STATUS lamp lights. &quot;--3&quot; is displayed.</td>
<td>Decrease of cooling performance or durability of refrigerating circuit.</td>
<td>1. This is likely to happen when a large amount of materials is stored. 2. Check ambient temp., voltage, and sealing of outer/inner door.</td>
</tr>
</tbody>
</table>

Note:
- The S code displayed on the temperature indicator is changed every few seconds if two or three status shown in the above table are detected at the same time. (--1 ⇒ --2 ⇒ --3 ⇒ --1 repeated)
- The monitoring function does not trigger a buzzer or conduct a safety operation.
- In the case of multiple indication of S code, follow the remedy for each status.
- The status monitor lamp (STATUS) may be lit under normal running condition when the independent inner door (MDF-U54V:MDF-5ID, MDF-U74V:MDF-7ID) is installed because of less cooling performance. In this case, adjust the air conditioning so that the ambient temperature is around 23°C, or set the chamber temperature 10°C higher than the current setting.
- The set mode returns to the temperature display mode automatically when 90 seconds has passed without any key operation.
The delay time of high and low stage side compressor can be changed to reduce the load on the power line and to facilitate the start-up (reset) of the freezer after power failure.

The example in the table 7 is based on the assumption that the delay time is changed to 4 minutes. (The delay time is set in 3 minutes at the factory.)

Note:
• The delay time should be the same for high stage side and low stage side compressors.
• The setting range for delay time is between 3 and 15 minutes. The cool down of chamber temperature may be slow when the setting of delay time is over 5 minutes, depending on the installation environment. There is no need of changing the delay time when the capacity of power source is adequate.

Table 7. Changing procedure for delay time (change from 3 minutes to 4 minutes)

<table>
<thead>
<tr>
<th>Description of operation</th>
<th>Key operated</th>
<th>Indication after operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>

<tr>
<td>6</td>
<td>SET</td>
<td>The delay time is memorized and the current chamber temperature is displayed.</td>
</tr>
</tbody>
</table>

• The compressor starts to operate with the delay time set by the above procedure at the time of power on or after power failure. However, the start up of the low stage side compressor is affected by the chamber temperature and the cascade condenser temperature. The delay time varies depending on how they meet the start up conditions. It is more than four minutes in case of the above example.
• The set mode returns to the temperature display mode automatically when 90 seconds has passed without any key operation.
The buzzer of door alarm is activated with 2 minutes delay when the door is open. The delay time is changeable.

Follow the procedure in table 8 below to change the setting of delay time. The procedure assumes that the delay time is changed from 2 minutes to 3 minutes. (The delay time is set in 2 minutes at the factory.)

Table 8. Changing procedure for delay time (change from 2 minutes to 3 minutes)

<table>

</tr>
</tbody>
</table>

**Note:**

- When the operation is started in high ambient temperature, the filter check lamp is sometimes flashed. In this case, the lamp is off automatically when the chamber temperature is getting lower.
- The freezer resumes the operation after power failure with the temperature setting before power failure as the chamber temperature setting and alarm temperature setting are memorized in the volatile memory.
- The chamber temperature is displayed for 5 seconds by pressing buzzer stop key (BUZZER) during power failure alarm. Then the buzzer is silenced. The alarm lamp keeps flashing.
WARNING
Always disconnect the power supply to the unit prior to any repair or maintenance of the unit in order to prevent electric shock or injury.
Ensure you do not inhale or consume medication or aerosols from around the unit at the time of maintenance. These may be harmful to your health.

Cleaning of cabinet

- Clean the unit once a month. Regular cleaning keeps the unit looking new.
- Use a dry cloth to wipe off small amounts of dirt on the outside and inside of the unit and all accessories. If the outside panels are dirty, clean them with a diluted neutral dishwashing detergent. (Undiluted detergent can damage the plastic components. For the dilution, refer to the instruction of the detergent.)

After the cleaning with the diluted detergent, always wipe it off with a wet cloth. Then wipe off the cabinet or accessories with a dry cloth.
- Never pour water onto or into the unit. Doing so can damage the electric insulation and cause failure.
- The compressor and other mechanical part are completely sealed. This unit requires absolutely no lubrication.

Cleaning of condenser filter

This unit is provided with the filter check lamp on the control panel. Clean the condenser filter when this lamp lights. Clean the condenser filter once a month even if the check lamp is not on since a clogged filter may cause shorter compressor life as well as the poor cooling.

Clean the condenser filter by the procedure below.

1. Open the grille by pulling it to you as shown in the figure.
2. Take out the condenser filter.
3. Wash the condenser filter with water.
4. Replace the condenser filter and the grille.
5. Check that the filter check lamp is off in the event the filter check lamp was ON.

WARNING
Do not touch the condenser directly when the filter is removed for cleaning. This may cause injury by hot surface.
Defrosting of inside wall

The frost is built at the upper portion of the chamber and inner door. The excessive frost possibly make some gap between the cabinet and door gasket, which may cause poor cooling. Remove the frost on the inner door with a scraper enclosed with the unit. Following shows the procedure for removing the chamber frost.

Note: For removing the frost, do not use a tool with sharp edge such as a knife or a screw driver.

1. Turn off the back-up system if applicable.

2. Take out and transfer all the contents to another freezer or a container which is refrigerated by liquid carbon dioxide or dry ice.

3. Turn off the power switch of the freezer.

4. Open the outer door and inner door. Remove the inner door by lifting up as shown in the figure.

5. Leave the freezer as it is.

6. The water accumulated on the bottom of the chamber should be wiped up with a dry cloth.

7. After cleaning the chamber and inner door, replace the inner door and start up the unit according to the procedure on page 14.

8. Put back the articles into the sufficiently cooled freezer compartment.

9. Turn on the back-up system if it is provided.
If the unit malfunctions, check out the following before calling for service.

<table>
<thead>
<tr>
<th>Malfunction</th>
<th>Check/Remedy</th>
</tr>
</thead>
</table>
| The chamber is not cooled at all     | ■ The circuit breaker of power source is active.  
■ The voltage is too low (In this case, call an electrician).  
■ The power is not supplied.  
■ The breaker is free.  
■ The large amount of articles (load) is stored in the chamber at one time. |
| The cooling is poor                  | ■ The ambient temperature is too high.  
■ The latch of inner door is not closed completely. The outer door is not closed firmly. (The frost or ice between the cabinet and door gasket possibly prevents door seal.)  
■ The air intake vent is blocked.  
■ The condenser filter is clogged. Always clean the filter when the filter check lamp is lit.  
■ The door is not shut tightly.  
■ The inner door is not installed correctly.  
■ The set temperature in the controller is not set properly.  
■ The grille is blocked out.  
■ The filter is clogged.  
■ The freezer is in the direct sunlight.  
■ There is any heating source near the freezer.  
■ A rubber cap and insulation are not set correctly.  
■ You put too many unfrozen articles into the chamber. |
| Alarm test key cannot actuate the alarm | ■ The alarm is activated only when the power switch is ON.  
■ When only the buzzer or only the alarm is actuated by the alarm test key, the unactuated part is out of order, and must be replaced. |

Note:
If the malfunction is not eliminated after checking the above items, or the malfunction is not shown in the above table, contact Sanyo sales representative or agent.
Location of a nickel-metal-hydride battery
This unit is provided a nickel-metal-hydride battery for the power failure warning device. The battery is located in the electrical box inside the cover on the lower left side. (Fig. 1)

⚠️ The high voltage components are enclosed in the electrical box. The cover should be removed by a qualified engineer or a service personnel only to prevent the electric shock.

Removal of nickel-metal-hydride battery
1. Turn off the power switch and disconnect the power supply plug.
2. As shown in the Fig. 2, remove 6 screws fixing the side cover with a screw driver and remove the side cover.
3. Remove 5 screws fixing the electrical box cover with a screw driver. (Fig. 3)
4. Disconnect the battery connector and remove 2 screws fixing the battery mounting plate. (Fig. 4)
5. Take out the battery.
6. Follow the procedure for recycling or proper disposal.
**DISPOSAL OF UNIT**

⚠️ **WARNING**
If the unit is to be stored unused in an unsupervised area for an extended period ensure that children do not have access and doors cannot be closed completely. The disposal of the unit should be accomplished by appropriate personnel. Always remove doors to prevent accidents such as suffocation.

---

**Recycle of battery**

The unit contains a rechargeable battery. The battery is recyclable. At the end of it's useful life, check with your local solid officials option or proper disposal.

*Label indication is obliged to comply with Taiwanese battery regulation.*
DISPOSAL OF UNIT

(English)
FOR EU USERS
The symbol mark and recycling systems described below apply to EU countries and do not apply to countries in other areas of the world.

Your SANYO product is designed and manufactured with high quality materials and components which can be recycled and/or reused.

The symbol mark means that electrical and electronic equipment, batteries and accumulators, at their end-of-life, should be disposed of separately from your household waste.

Note:
If a chemical symbol is printed beneath the symbol mark, this chemical symbol means that the battery or accumulator contains a heavy metal at a certain concentration. This will be indicated as follows: Hg: mercury, Cd: cadmium, Pb: lead

In the European Union there are separate collection systems for used electrical and electronic equipment, batteries and accumulators.
Please, dispose of them correctly at your local community waste collection/recycling centre.

Please, help us to conserve the environment we live in!

(German)
Für EU-Staaten
Das Symbol und das erwähnte Wiederverwertungssystem gelten nur für die Länder der EU und nicht für andere Länder oder Gebiete in der Welt.

Die Produkte von SANYO werden aus hochwertigen Materialien und Komponenten gefertigt, die sich wieder verwenden lassen.

Das Symbol bedeutet, dass elektrische oder elektronische Geräte, Batterien und Akkus am Ende ihrer Lebensdauer nicht im Haushaltsmüll entsorgt werden dürfen.

Hinweis:
Ein chemisches Zeichen unter dem Symbol bedeutet, dass die Batterie bzw. der Akku Schwermetalle in gewissen Konzentrationen enthält. Die Metalle werden wie folgt bezeichnet: Hg: Quecksilber, Cd: Kadmium, Pb: Blei

In der Europäischen Union gibt es separate Sammelstellen für elektrische und elektronische Geräte, Batterien und Akkus.
Entsorgen Sie solche Geräte bitte richtig in der kommunalen Sammelstelle bzw. im Recyclingzentrum.

Helfen Sie mit, die Umwelt in der wir leben, zu schützen.
DISPOSAL OF UNIT

(French)
POUR LES UTILISATEURS DE UE
Le symbole et les systèmes de recyclage évoqués ci-dessous s'appliquent uniquement aux pays de UE.

Votre produit SANYO est conçu et fabriqué avec des composants et des matériaux de hautes qualités qui peuvent être recyclés et/ou réutilisés.

Le symbole signifie que les équipements électriques et électroniques, les batteries et les accumulateurs ne doivent pas être mis au rebut avec les déchets domestiques à l'issue de leur durée de vie.

Remarque:
Si un symbole chimique est imprimé sous le symbole, le symbole chimique indique que la batterie ou l'accumulateur contient une certaine concentration de métaux lourds. Les métaux sont indiqués de la manière suivante: Hg: mercure, Cd: cadmium, Pb: plomb.

Il existe différents systèmes de collecte pour les équipements électriques et électroniques, les batteries et les accumulateurs usagés au sein de l'Union européenne.
Veuillez mettre les équipements au rebut de manière correcte, auprès de votre centre de recyclage/de collecte des déchets local.

Aidez-nous à préserver l'environnement dans lequel nous vivons!

Les machines ou appareils électriques et électroniques contiennent fréquemment des matières qui, si elles sont traitées ou éliminées de manière inappropriée, peuvent s'avérer potentiellement dangereuses pour la santé humaine et pour l'environnement.
Cependant, ces matières sont nécessaires au bon fonctionnement de votre appareil ou de votre machine. Pour cette raison, il vous est demandé de ne pas vous débarrasser de votre appareil ou machine usagé avec vos ordures ménagères.

(Spanish)
PARA USUARIOS DE LA UNION EUROPEA
El símbolo y los sistemas de reciclado descriptos a continuación se aplican para países de la Unión Europea y no se aplica para países en otras áreas del mundo.

Su producto SANYO fue diseñado y fabricado con materiales de alta calidad y componentes que pueden ser reciclados y/o vueltos a usar.

El símbolo significa que los equipos eléctricos y electrónicos, baterías y acumuladores, al final de su vida útil, debe ser desecharos separadamente de sus residuos domiciliarios.

Nota:
Si hay un símbolo químico impreso debajo del símbolo, este símbolo químico significa que la batería o acumulador contiene una cierta concentración de un metal pesado. Esto es indicado de la siguiente manera: Hg: mercurio, Cd: cadmio, Pb: plomo

En la Unión Europea hay sistemas de recolección separados para equipos eléctricos y electrónicos, baterías y acumuladores usados. Por favor, disponga de ellos correctamente en el centro de recolección de residuos/reciclado de la comunidad de su localidad.

Por favor, ayúdenos a proteger el medio ambiente en que vivimos!
DISPOSAL OF UNIT

(Portuguese)
PARA UTILIZADORES DA UE
O símbolo e os sistemas de reciclagem descritos abaixo aplicam-se aos países da UE e não se aplicam aos países noutras áreas do mundo.

O seu produto SANYO foi concebido e fabricado com materiais e componentes de elevada qualidade que podem ser reciclados e/ou reutilizados.

O símbolo significa que o equipamento eléctrico e electrónico, baterias e acumuladores, em final de vida, não devem ser deitados fora juntamente com o lixo doméstico.

Atenção:
Se estiver impresso um símbolo químico debaixo do símbolo de , este símbolo químico significa que a bateria ou acumulador contém um metal pesado numa determinada concentração. Estará indicado da seguinte forma: Hg: mercúrio, Cd: cádmio, Pb: chumbo

Na União Europeia existem sistemas de recolha separados para equipamento eléctrico e electrónico, baterias e acumuladores.
Por favor, entregue-os no seu centro de reciclagem/recolha de lixo local.

Por favor, ajude-nos a conservar o ambiente!

(Italian)
PER UTENTI UE
Il simbolo e i sistemi di riciclaggio descritti di seguito si applicano esclusivamente ai paesi dell’UE.

Questo prodotto SANYO è stato progettato e realizzato con materiali e componenti di elevata qualità che possono essere riciclati e/o riutilizzati.

Il simbolo di riciclaggio mostrato di seguito indica che i dispositivi elettrici ed elettronici, le batterie e gli accumulatori, una volta esauriti, devono essere smaltiti separatamente rispetto ai rifiuti domestici.

Nota:
Se sotto il simbolo di riciclaggio appare un simbolo chimico, esso sta ad indicare che la batteria o l’accumulatore contengono metalli pesanti a determine concentrazioni. Questo viene specificato come segue: Hg: mercurio, Cd: cadmio, Pb: piombo.

Nell’Unione europea esistono diversi sistemi per la raccolta dei rifiuti speciali quali i dispositivi elettrici ed elettronici, le batterie e gli accumulatori.
Si raccomanda di provvedere allo smaltimento di tali rifiuti secondo quanto previsto dalle normative vigenti in materia.

Aiutaci a conservare l’ambiente!
Het symbool en de recycleersystemen die hieronder beschreven worden, zijn van toepassing op de landen in de EU en zijn niet van toepassing op landen in andere delen van de wereld.

Uw SANYO product is ontworpen en gemaakt met materialen en onderdelen van hoge kwaliteit, die gerecycleerd en opnieuw gebruikt kunnen worden.

Het symbool betekent dat elektrische en elektronische apparatuur, batterijen en accu's aan het eind van hun leven apart van uw huisafval weggegooid moeten worden.

Let op:
Indien een chemisch symbool afgedrukt staat onder het symbool, betekent dit chemisch symbool dat de batterij of accu een zwaar metaal met een bepaalde concentratie bevat. Dit wordt als volgt aangegeven:
Hg: kwik, Cd: cadmium, Pb: lood

In de Europese Unie zijn afzonderlijke inzamelingssystemen voor gebruikte elektrische en elektronische apparatuur, batterijen en accu's.
Wilt u deze op de juiste manier weggooien bij uw plaatselijk afvalinzameling-/recyclingcentrum in uw buurt?

Help ons het milieu waarin wij leven in stand te houden!

(Dutch)
VOOR GEBRUIKERS IN DE EU
Het symbool en de recycleersystemen die hieronder beschreven worden, zijn van toepassing op de landen in de EU en zijn niet van toepassing op landen in andere delen van de wereld.

Uw SANYO product is ontworpen en gemaakt met materialen en onderdelen van hoge kwaliteit, die gerecycleerd en opnieuw gebruikt kunnen worden.

Het symbool betekent dat elektrische en elektronische apparatuur, batterijen en accu's aan het eind van hun leven apart van uw huisafval weggegooid moeten worden.

(Swedish)
FÖR ANVÄNDARE INOM EU
Den symbolmärkning och de återvinningssystem som beskrivs här nedan gäller länder inom EU och gäller inte länder i någon annan del av världen.

Din SANYO-produkt har konstruerats och tillverkats med delar och material av hög kvalitet, som kan återvinnas och/eller återanvändas.

Symbolmärkningen innebär att elektrisk och elektronisk utrustning, batterier och ackumulatörer, vid slutet av deras livslängd, inte får slängas som hushållsavfall utan skall slängas separat.

Observera:
Om en kemisk symbol finns tryckt under denna symbolmärkning, betyder denna kemiska symbol att batteriet eller ackumulatorn innehåller en tungmetall med en viss koncentration. Detta indikeras på följande sätt: Hg: kvicksilver, Cd: kadmium, Pb: bly

I den Europeiska Unionen finns det separata uppsamlingssystem för använd elektrisk och elektronisk utrustning, batterier och ackumulatörer.
Gör dig av med sådana saker på rätt sätt på den speciella lokala platsen för återsamling/återanvändning.

Hjälpa oss att bevara den miljö vi lever i!
An automatic temperature recorder is available for this freezer as the optional component. The type of the recorder is MTR-G85.

Following shows the attachment procedure.

1. Remove four screws on the front panel and take it off. Then take off the cover for the recorder mounting space by removing four screws. (Fig. 1)

2. As shown in the Fig. 2, insert the temperature recorder to the mounting space and fix it to the back side of the front panel by using the recorder fixture enclosed with the recorder.

3. Take off the recorder sensor cover in the chamber (bottom left side) by removing two screws. Then remove the rubber cap and insulation covering the access port. (Fig. 3)

4. As shown in the Fig. 4, pass the recorder sensor through the sensor guide pipe from the front to the back. The sensor guide pipe is provided on the upper left side of the base compartment.

5. Remove the wire grille on the back bottom of the freezer.

6. Take out the recorder sensor from the guide pipe at the back side and pass the sensor to the chamber through the access port. (Fig. 5) A rubber cap and insulation are removed.

7. Attach the recorder sensor on the sensor cover with the enclosed clips. Seal the access port with a silicon and replace the recorder sensor cover. (Fig. 6)

8. Remove the connector cover. Connect the recorder connector at the end of the power cord with the white connector on the left of the base compartment. Bind the extra lead wire of the sensor with a nylon clip on the back of the temperature recorder. (Fig. 7)

9. Replace the front panel and fix it with screws. Replace the wire grille on the back bottom of the freezer.

10. Operate the freezer until the chamber temperature gets to the set temperature. Check the recorded temperature and chamber temperature displayed on the control panel. Adjust the zero adjustment volume on the temperature recorder so that the recorded temperature can correspond with the displayed temperature if they are not compliance each other.
**WARNING**
As with any equipment that uses CO2 gas, there is a likelihood of oxygen depletion in the vicinity of the equipment. It is important that you assess the work site to endure there is suitable and sufficient ventilation. If restricted ventilation is suspected, then other methods of ensuring a safe environment must be considered. These may include atmosphere monitoring and warning devices.

This freezer can be provided with a back-up system (CVK-UB2) which is available as an optional component. For the installation, refer to the instruction manual enclosed with the system.

1. **Switch of back-up system (BACKUP)**
   When turning on the system, the lamp is brightened. This means that the system is ready. To stop the operation of the system, turn off this switch.

2. **Test switch (TEST)**
   This switch is for checking the operation of back-up system. Pressing this switch is resulted in the release of liquid carbon dioxide without system operation.

3. **Temperature setting knob (TEMP. SET)**
   With this knob, set the temperature at which the system is operated. The effective set temperature range is between -50°C and -70°C.
INDEPENDENT INNER DOOR (OPTION)

There is an independent inner door (MDF-7ID or MDF-5ID) of the shelf width of the chamber in this product by the option. The user divided into every shelf of the chamber is to change a standard independent inner door to MDF-7ID (for MDF-U74V) or MDF-5ID (for MDF-U54V). Refer to an attached installation manual for the installation of MDF-7ID/MDF-5ID in the independent inner door.

Note:
Be careful because this manual (Page 39"PERFORMANCE") can cool down a cooling performance more than mention when the put an independent inner door (MDF-7ID or MDF-5ID).
Cooling performance : -82°C at the center of the chamber (ambient temperature; 30°C, no load)
Set it up by more than +5°C to the lowest set temperature when the use in a long time.
IR-224U cannot be used when an independent inner door is set.

DRAWER (OPTION)

There is a drawer (MDF-50R ; for MDF-U54V) for the chamber bottom side in MDF-U54V by the option. Install MDF-50R (For MDF-U54V) under the chamber when it use a drawer in the chamber. Refer to an attached manual in MDF-50R when it install MDF-50R on the chamber.
MOUNTING OF INTERFACE BOARD (OPTION)

By installing an interface board (MTR-480), the log data can be transmitted to a PC. The mounting procedure is as follows:

1. Remove 4 screws of the communication box hole cover in the control panel. (Fig. 1)

2. Provide an interface board (MTR-480) code from the fitting hole. (Fig. 2)

3. Refer to the instruction manual attached to the interface board for the setup of the TERMINATOR switch of the interface board (MTR-480). (Fig. 3)

4. Connect to the connector side (the back side of the interface board) of a communication cable (RS-232C or RS-485) to use for the interface board (MTR-480). (Fig. 5 is a connection example to use RS-232C.) (Fig. 4 and 5)

5. Fix an interface board (MTR-480) on the control panel with 4 screws. (Fig. 6)

* When a data transmitting function to the personal computer is done, an interface board MTR-480 (option goods) and communication cable of 9 pin Dsub cross type for RS232C are necessary.
By installing an LAN interface board (MTR-L03), the log data can be transmitted to a PC. The mounting procedure is as follows:

1. Remove 4 screws of the communication box hole cover in the control panel. (Fig. 1)

2. Provide an LAN interface board (MTR-L03) code from the fitting hole. (Fig. 2)

3. Connect to the connector side (the back side of the LAN interface board) of a connector cable to use for the LAN interface board (MTR-L03). (Fig. 4 is a connection example to use) (Fig. 3 and Fig. 4)

5. Fix an LAN interface board (MTR-L03) on the control panel with 4 screws.

Note:
The connecting cable between the PC and MTR-L03 terminal is not enclosed. Provide a cross type cable of less than 100 m length having a pin plug.
The optional inventory racks (IR-220U, IR-224U) are useful to store the precious materials in the chamber effectively. When the racks are used, it is necessary to adjust the height of the shelves. Set the shelf support as shown in the figure below.

**NOTE**

Only inventory rack IR-220U can be applied when the independent inner door (MDF-7ID or MDF-5ID) is installed.

No. 4 under second screw from the top (There is a mark which hollowed at the shelf support front side.)

No. 3 under fifth screw from the top (There is a mark which hollowed at the shelf support front side.)

No. 3 under second screw from the bottom (There is a mark which hollowed at the shelf support front side.)

**Note:**

- Design or specifications will be subject to change without notice.
- The battery for power failure alarm is an article for consumption. It is recommended that the battery will be replaced about every 3 years. Contact Sanyo sales representative or agent at the time of replacement of the battery for recycling.
- Fan motors are expendable supplies. Replace them for about every 6 years. Contact Sanyo sales representative or agent at the time of replacement of the fan motor.

*: Power source of the automatic temperature recorder shall be 220 V.

**Note**: The unit with CE mark complies with EC directives 89/336/EEC, 93/68/EEC and 73/23/EEC

*: Maximum cooling performance.

The chamber temp. can be reached at –86°C at ambient temp. 30°C with noload.
CAUTION
Please fill in this form before servicing.
Hand over this form to the service engineer to keep for his and your safety.

Safety check sheet

1. Freezer contents:
   - Risk of infection: [ ] Yes [ ] No
   - Risk of toxicity: [ ] Yes [ ] No
   - Risk from radioactive sources: [ ] Yes [ ] No

   (List all potentially hazardous materials that have been stored in this unit.)

   Notes:

2. Contamination of the unit
   - Unit interior: [ ] Yes [ ] No
   - No contamination: [ ] Yes [ ] No
   - Decontaminated: [ ] Yes [ ] No
   - Contaminated: [ ] Yes [ ] No
   - Others:

3. Instructions for safe repair/maintenance of the unit
   a) The unit is safe to work on: [ ] Yes [ ] No
   b) There is some danger (see below): [ ] Yes [ ] No

   Procedure to be adhered to in order to reduce safety risk indicated in b) below.
